

Petrochemical boom contributing to rise in health problems

Many petrochemicals / plastics are **endocrine disruptors (EDCs)** which interfere with hormones and **undermine health**

...and contributing to increasing rates of disease between **28% and 150%** (from 1990 to 2019)

cancer
diabetes
chronic respiratory disease
neurodevelopmental disorders

“Health Impacts of Fossil Fuel Derived Endocrine Disruptors”

Climate change exacerbates **chemical exposures, health inequities**

Clinicians can improve patient health by **addressing growing burden of EDCs**
